

**Amendments to the Claims:**

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Previously Presented) An electronic apparatus, comprising:
  - a case having a transparent member that defines one surface;
  - a luminescent panel formed in the case, the transparent member having electrodes over the one surface and being integrated with the luminescent panel; and
  - a display means formed in the case, the display means being overlapped with the luminescent panel.

2. (Currently Amended) The electronic apparatus according to Claim 1,  
the luminescent panel being a transparent panel that includes a transparent component

~~the luminescent panel defining an area that is not provided with luminescent elements, the transparent member defining an area corresponding to the area of the luminescent panel that is not provided with luminescent elements, the area of the transparent member being treated so as not to transmit ultraviolet light.~~

3. (Canceled)
4. (Previously Presented) The electronic apparatus according to Claim 1,  
the luminescent panel defining an area that is not provided with luminescent elements, the transparent member defining an area corresponding to the area of the luminescent panel that is not provided with luminescent elements, the area of the transparent member being treated so as not to transmit ultraviolet light.

5. (Previously Presented) An electronic apparatus according to Claim 1,  
the case being filled with an inactive gas.

6. (Previously Presented) An electronic apparatus according to Claim 1,

the case being evacuated.

7. (Canceled)

8. (Previously Presented) The electronic apparatus according to Claim 5, further comprising:

a controller that controls the drive of the luminescent panel, opposing a non-display surface of the luminescent panel,

the luminescent panel being curved such that a surface that displays information of the luminescent panel is convex, and the electrode lead-out portions provided at ends of the luminescent panel in the curving direction being connected to the controller.

9. (Previously Presented) The electronic apparatus according to Claim 8,

the curving direction being substantially perpendicular to the longitudinal direction of the electrodes provided in the luminescent panel.

10. (Canceled)

11. (Canceled)

12. (Previously Presented) The electronic apparatus according to Claim 1,

the transparent member having a curve surface, and the luminescent panel being formed along the curved surface of the transparent member in a curved manner.

13. (Previously Presented) The electronic apparatus according to Claim 12,

each end of the luminescent panel having an electrode lead-out portion that is directly connectable to a terminal of a controller.

14. (Previously Presented) The electronic apparatus according to Claim 1,

the display means is a time-display.
